

**RESPONSIBLE CONDUCT IN AND AROUND  
HORSE ARENAS  
WITH RUBBER GRANULATE**

#### **GENAN**

- is a Danish company, which is world leader in the recycling of end-of-life tyres
- is a high-technology manufacturer, working with sustainability, the recycling of valuable resources as well as the responsible use of rubber granulate
- focuses on high quality and the manufacture of products with a high degree of purity

Based on knowledge and experience with rubber infill on artificial turf pitches, Genan has made three guides with recommendations for the construction and maintenance of as well as responsible conduct around horse arenas with rubber granulate.

# FOR USERS OF OUR HORSE ARENAS

We use GENAN ULTRA COARSE rubber granulate as top layer. A top layer of recycled rubber granulate provides a resilient, shock-absorbing surface, offering less strain to joints and tendons – and reducing hoof wear. And should you fall off, the elastic rubber layer will ensure a softer landing.

## PROPER CONDUCT WHEN USING A HORSE ARENA WITH RUBBER GRANULATE

Rubber granulate must stay inside the horse arena to avoid dispersal to surroundings. Good habits to show when using the horse arenas are thus the following:

1. Brush rubber granules off the horse's leg boots and bandages on the paved / tiled area when you leave the arena. Sweep granules back inside the arena afterwards.
2. Use a horse manure fork to pick up droppings, if any, in the arena. Lower the underside of the fork into a bucket of water placed inside the arena. Rubber granules are loosened and will stay in the bucket. Empty the bucket in the arena when full. Do not throw rubber granules onto the manure heap.
3. If rubber granules are found on the horse's equipment back in the stable aisle, sweep them up and throw them into the waste bin.

Thank you for taking care of our horse arenas – and the environment!

# GENAN INSIDE – CARE FOR THE ENVIRONMENT THROUGH RESPONSIBLE CONDUCT

Taking good care of the environment is a responsibility that we all share. This goes for everyone, everywhere – also in and around horse arenas with rubber granulate.

When installing a horse arena with rubber granulate, it is important to incorporate the right measures and to make sure that regular maintenance is performed correctly and responsibly to ensure that granules stay inside the arena. Furthermore, the conduct of users is a factor influencing the volume of rubber granulate spreading from the horse arena.

If we help each other create a culture of responsible conduct in connection with the use of horse arenas with rubber granulate, we can ensure that rubber granules remain inside the arenas – instead of spreading to nature.
